# NOTES ON COBORDISM THEORY

by Robert E. Stong

Mathematical Notes, Princeton University Press

1968

**A Detailed Table of Contents**

compiled by Peter Landweber and Doug Ravenel in November, 2007

based on decades of careful reading

| Chapter I. Introduction–Cobordism Categories | 1 |
| Cobordism categories | 3 |
| Relative cobordism | 9 |

| Chapter II. Manifolds with Structure – the Pontrjagin-Thom theorem | 14 |
| (B, f) structures | 14-16 |
| Generalized Pontrjagin-Thom theorem | 18-23 |
| Tangential structures, sequences of maps, ring structure, relative groups | 23-26 |

| Chapter III. Characteristic Classes and Numbers | 27 |
| Spectra | 27 |
| Ring spectra | 28 |
| Thom class | 29 |
| Fundamental class | 30 |
| Characteristic class, characteristic number | 31 |
| Orientation and Thom isomorphism | 36 |
| Atiyah duality | 37 |
| Alexander and Spanier-Whitehead duality | 39 |

| Chapter IV. The Interesting Examples – A Survey of the Literature | 40 |
| Example 1: Framed cobordism \( \Omega^* \) | 40 |
| Example 2: Unoriented cobordism \( \Omega \) | 40 |
| Example 3: Complex cobordism \( \Omega^U \) | 41 |
| Example 4: Oriented cobordism \( \Omega^{SO} \) | 42 |
| Example 5: \( w_1 \) spherical cobordism \( \mathcal{W}_* \) | 43 |
| Example 6: Bordism \( \Omega_*(B, f)[X, A] \) | 43 |
| Example 7: Special unitary cobordism \( \Omega_*^{SU} \) | 44 |
| Example 8: \( c_1 \) spherical cobordism \( \mathcal{W}_U \) | 45 |
| Example 9: Spin cobordism \( \Omega_*^{Spin} \) | 46 |
| Example 10: Spin\(^c\) cobordism \( \Omega_*^{Spin c} \), etc. | 47 |
| Example 11: Complex-Spin cobordism \( \Omega_*^{c-S} \) | 48 |
| Example 12: Symplectic cobordism \( \Omega_*^{Sp} \) | 48 |
| Fifteen more examples and two pseudoeexamples | 48-58 |

| Chapter V. Cohomology of Classifying Spaces | 59 |
| Vector bundles | 59 |
| Definition of characteristic classes | 61 |
| Splitting lemma | 65 |
| Thom spaces | 66 |
| Ordinary cohomology of Grassmannians | 69 |
| Relationship between fields | 73 |
| Characteristic numbers of manifolds (projective spaces, Milnor hypersurfaces) | 75 |
| Cohomology of BO and BSO | 81 |
Chapter X. Special Unitary Cobordism

- Structure of $\Omega^*_{SU} \otimes \mathbb{Q}$ ................................................................. 238
- Torsion in $\Omega^*_{SU}$ is 2-primary ................................................................. 239
- Construction of SU-manifolds with certain characteristic numbers ................... 239
- $\Omega^*_{SU} \otimes \mathbb{Z}[\frac{1}{2}]$ is polynomial .................................................. 242
- All torsion in $\Omega^*_{SU}$ has order 2 ............................................................. 243
- Torsion in $\Omega^*_{SU}$ ................................................................. 248
- KO-theory characteristic numbers ............................................................... 249
- Chern numbers of SU-manifolds ................................................................. 255
- $\Omega^*_{SU}$ is determined by integral cohomology and KO characteristic numbers 261
- Product in $\mathcal{W}_*(\mathbb{C}, 2)$ ................................................................. 262
- Relation to framed cobordism ................................................................. 267
- Relation to complex cobordism ................................................................. 273
- Relation to unoriented cobordism ............................................................ 276
- Relation to oriented cobordism ............................................................... 278

Chapter XI. Spin, Spin$^c$, and Similar Nonsense ............................................................. 283

- Clifford algebra Cliff($V$) ................................................................. 285
- Spin($k$), Spin$^c$($k$) ................................................................. 287
- Pin($k$), Pin$^c$($k$) ................................................................. 289
- $H^*(BSpin; \mathbb{Z}_2)$ ................................................................. 292
- Connective covers of BO and BU .............................................................. 295
- Filtration of KO$^*(X)$ and K$^*(X)$ ............................................................ 302
- Isomorphic homologies ................................................................. 308
- 2-primary analysis of MSpin and MSpin$^c$ .................................................. 319
- Structure of $\Omega^*_{Spin}$, $\Omega^*_{Spin^c}$ ...................................................... 336
- KO-theory and mod 2 cohomology characteristic numbers determine $\Omega^*_{Spin}$ 337
- Ordinary ($\mathbb{Q}, \mathbb{Z}_2$) cohomology characteristic numbers determine $\Omega^*_{Spin^c}$ 337
- Basis for $\Omega^*_{Spin} \otimes \mathbb{Z}_2$ ............................................................. 339
- $\Omega^*_{Spin} \otimes \mathbb{Z}_2$ is polynomial ...................................................... 348
- Relation to framed cobordism ............................................................... 350
- Relation to unoriented cobordism ............................................................ 350
- Relation to oriented cobordism .............................................................. 351
- Relation to complex cobordism ............................................................ 353
- Relation of Spin and Spin$^c$ ............................................................... 354

Appendix 1. Advanced Calculus (23 pages)

Appendix 2. Differential Topology (25 pages)

Bibliography (142 items, 8 pages)
